DETAILED ACTION

Allowable Subject Matter

1. Claims 4-8 are allowable over the prior art of record.
2. The following is an examiner's statement of reasons for allowance:

As per independent claims 4-8, the claim language pertaining to a different calculation for a short and a long pitch period expectation, in addition to omitting the pitch processing of the subsequent waveforms, is not explicitly taught by the prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Art Unit: 2655

4. Claims 1-3 are rejected under 35 U.S.C. 102(b) as being anticipated by Yeldener et al (5774837).

As per claim 1, Yeldener et al (5774837) teaches:

“in a voice signal pitch period.time period” as voice detecting, and pitch period processing (col. 11 lines 1-14);

“reducing.pitch period” as smoothing the pitch (col. 13 lines 37-46), which averages over errant pitch determinations (col. 13 lines 37-43), which in affect removes, or reduces the number of pitch representations.

As per claim 2, Yeldener et al (5774837) teaches:

“in a voice signal pitch period.time period” as voice detecting, and pitch period processing (col. 11 lines 1-14);

“judging.predetermined time period” as using the ration of possible peak amplitudes versus a frequency response of a comb filter (col. 11 line 45 – col. 12 line 20)

“the number of times.detected pitch period” as considering hk harmonics of the main frequency amplitude (col. 12 lines 18-250 and checking for sub-multiples (col. 12 line 55 – col. 13 line 20).

As per claim 3, Yeldener et al (5774837) teaches:

“first means....predetermined time period” as voice detecting, and pitch period processing (col. 11 lines 1-14);

Art Unit: 2655

“second means....reference value; third means.....pitch periods detected” as using the ration of possible peak amplitudes versus a frequency response of a comb filter (col. 11 line 45 – col. 12 line 20);

“fourth means.....detected pitch period” as considering hk harmonics of the main frequency amplitude (col. 12 lines 18-250 and checking for sub-multiples (col. 12 line 55 – col. 13 line 20);

“and omitting.....periods detecting” as omitting the rest of the checking steps if the ratio is less than the adjustable threshold (col. 13 lines 1-13).

Conclusion
